

TETRADRY

Lolium perenne

- Excellent visual merit during drought
- Heat tolerant
- Perfect partner for tall fescue
- Valuable component in mixtures with diploid perennial ryegrasses

Excellent visual merit during severe drought

The picture shown at the bottom of this page was taken in our trials on July 6, 2017, after severe drought and high temperatures.

TETRADRY is as green as tall fescue whereas even the best diploid perennial ryegrasses show pronounced loss of colour.

When the target is stay-green during summer

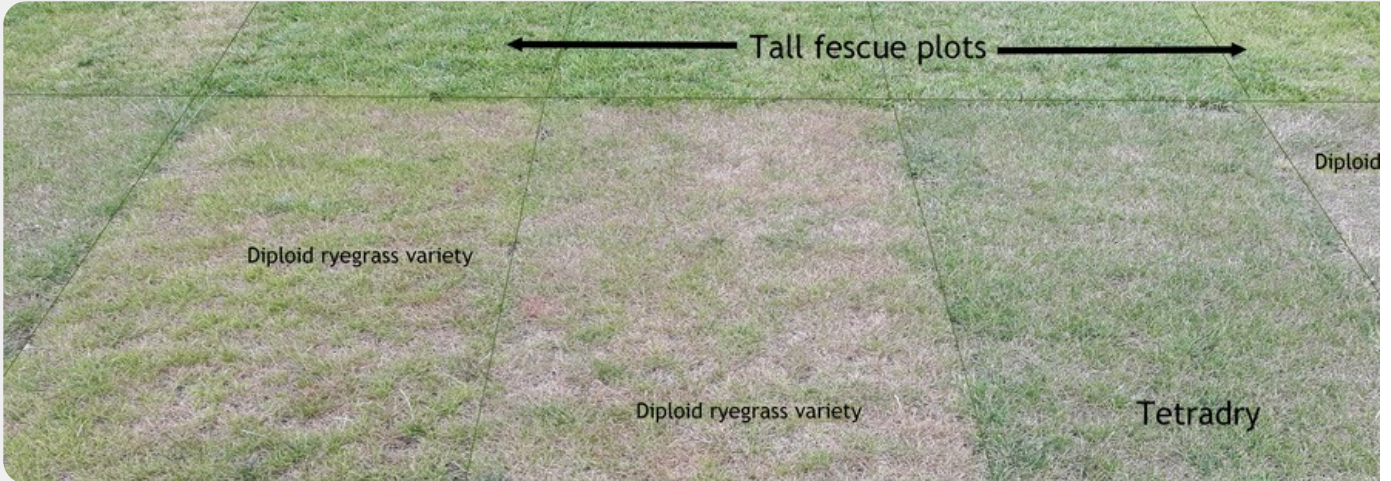

Then TETRADRY is the optimal choice, whether in mixtures with tall fescue (e.g. 20% Tetradry by weight) or diploid perennial ryegrasses (50-60% Tetradry by weight).

Verified by RadiMax

Severe spring and summer drought is faced more often than ever by Professional turf managers. Together with Copenhagen University DLF is testing the root architecture and drought tolerance in the advanced screening facility RadiMax. TETRADRY is Verified by RadiMax.

Technical Specifications

- Perennial ryegrass
- Excellent drought tolerance!
- Listed/recommended in EU FR UK
